44.645Acres MOL – Home Site Ranch Land and Recreation Property Golinda, Falls County, TX 76655

Property Highlights

Location – The property is located off County Road 427/ West Central in Golinda Texas. From Robinson head South on Hwy 77 towards Golinda. In Golinda turn right onto CR 427/ W Central travel for a quarter mile the property is located on the right. Located just 10 minutes from Waco, approximately 1.5 hours from Fort Worth, Texas, 1 hour 20 minutes from Austin and 2 hours 15 minutes from Houston.

Acres – 44.645 acres MOL according to Falls County Appraisal District.

Improvements- Property is covered in Coastal Bermuda and native grasses. An 82' X 120' Barn with concrete floor is connected to a set of pipe working pens. Sorting pens include concrete water troughs. The property is cross fenced into several traps making it easy to rotate cattle or livestock.

Water – Golinda Water Supply services the area there is an existing water meter on the property. There are three stock tanks on the property.

Electricity –Heart of Texas Electric services the area and there is an existing meter on the property.

Soil – There are various soil types on the property. Please refer to the USDA Soil Map located in this brochure for soil types.

Minerals – Seller reserves all owned minerals.

Topography – The land is flat with gently rolling areas for a home site.

Current Use – Privately owned and is used for cattle grazing.

Ground Cover – Property is covered in improved grasses as well as some native grasses.

Easements – An abstract of title will need to be performed to determine all easements that may exist. Easements known are for utility.

Showings - By appointment only. If applicable, buyers who are represented by an agent/broker must have its agent/broker present at all showings to participate in any co-brokerage commissions.

Presented At - \$290,192.00- \$6,500 an acre

SALE**

44.645Acres MOL – Home Site Ranch Land and Recreation Property Golinda, Falls County, TX 76655

Soil Type – 24

24—Ferris-Heiden complex, 5 to 12 percent slopes, severely eroded. This map unit consists of well drained, sloping to strongly sloping soils on uplands. It is made up of small areas of Ferris and Heiden soils so intricately mixed that separation is not practical at the scale mapped. Most areas are rilled and are dissected by deep gullies that are 10 to 75 feet apart. Slopes are convex. Areas are in long narrow bands that range from 5 to 25 acres in size.

A typical map unit is 65 percent Ferris soils, 22 percent Heiden soils, and 13 percent gray and olive shaly clay in the bottoms of gullies. The Ferris soils occupy the sides of gullies and sloping areas leading to the gullies. The less eroded Heiden soils are between the gullies.

Typically, the Ferris soils have a surface layer of light yellowish brown, moderately alkaline clay about 10 inches thick. Between depths of 10 and 38 inches is light brownish gray, moderately alkaline clay. The soil is underlain by mottled light brownish gray and light gray, moderately alkaline shaly clay.

The Ferris soils are moderately deep to deep. Permeability is very slow, and available water capacity is high. Runoff is rapid. The hazard of erosion is severe.

Typically, the Heiden soils have a surface layer of dark grayish brown, moderately alkaline clay about 17 inches thick. Between depths of 17 and 35 inches is grayish brown, moderately alkaline clay. Between depths of 35 and 56 inches is olive, moderately alkaline clay that has olive yellow mottles. The underlying layer is light yellowish brown, moderately alkaline shaly clay that has yellow mottles.

The Heiden soils are deep. Natural fertility is high. Permeability is very slow, and the available water capacity is high. Runoff is rapid. The hazard of water erosion is severe.

These soils are not suitable for crops. They have low potential for pasture and urban use. The restrictive limitations are slope, shrinking and swelling with changes in moisture, gullies, slow percolation, and water erosion. Costly filling, shaping, and smoothing would be required to reclaim areas of these soils.

These soils have high potential for range, even though the climax vegetation has been destroyed by cultivation. They have potential for tall grasses, and live oak, elm, and hackberry trees.

The potential for recreation is low. The clayey surface layer, very slow permeability, and slope are the most restrictive limitations for this use. Potential for openland wildlife habitat is medium, and potential for rangeland wildlife habitat is low. Capability subclass VIe; Ferris part in Eroded Blackland range site, Heiden part in Blackland range site.

SALE**

44.645Acres MOL – Home Site Ranch Land and Recreation Property Golinda, Falls County, TX 76655

Soil Type – 30

30—Heiden clay, 3 to 5 percent slopes. This deep, well drained, gently sloping soil is on uplands. Slopes are convex. Areas are long and narrow and range from 5 to 20 acres in size.

The surface layer of this soil, to a depth of 20 inches, is dark grayish brown, moderately alkaline clay. Between depths of 20 and 41 inches is olive, moderately alkaline clay. The underlying layer, to a depth of 80 inches, is yellow, moderately alkaline clay that has olive yellow mottles.

This soil is difficult to work. When wet, it is sticky and plastic; when dry, it is hard and clods when plowed. Dense plowpan layers are common in cultivated areas. The permeability is very slow, and the available water capacity is high. The root zone is deep, but penetration by roots is slow. Runoff is slow. The hazard of water erosion is moderately severe.

Included with this soil in mapping are small areas of Ferris, Houston Black, Burleson, and Trinity soils. The Ferris soils occupy gullies and steeper side slopes. The Houston Black and Burleson soils are on less sloping parts of the landscape and the Trinity soils occupy flood plains. The included soils make up 10 percent of this map unit.

This soil is used about equally for crops and pasture. It has medium potential for production of crops, but it is limited by slope. Grain sorghum, cotton, and small grain are the main crops. The main objectives of management are controlling erosion and improving tilth. Terracing and growing crops that produce large amounts of residue help control erosion and maintain soil tilth.

This soil has high potential for pasture. It is well suited to improved bermudagrass, kleingrass, and King Ranch bluestem. Pasture management includes fertilization, weed control, and controlled grazing.

This soil has high potential for range, but very few acres are used for this purpose. The climax plant community is tall grasses and an overstory of a few large live oak, elm, and hackberry trees along drainageways.

This soil has low potential for most urban uses. The limitations that affect urban development are the shrinking and swelling with changes in moisture, corrosivity to uncoated steel, and slow percolation. The potential for recreation is low. The clayey surface layer and the very slow permeability are the most restrictive limitations for this use. Potential for openland wildlife habitat is medium, and potential for rangeland wildlife habitat is low. Capability subclass IIIe; Blackland range site.

www.texasfarmandranchrealty.com

**FOR
SALE**

44.645 Acres MOL – Home Site Ranch Land and Recreation Property Golinda, Falls County, TX 76655

Soil Type – 35

35—Houston Black clay, 1 to 3 percent slopes. This deep, moderately well drained, gently sloping soil is on smooth ridges on foot slopes of uplands. Slopes are convex. Areas are long and narrow to broad in shape and range from 10 to 50 acres in size.

The soil has a surface layer of very dark gray, moderately alkaline clay to a depth of 28 inches. The next layer is dark gray, moderately alkaline clay to a depth of 48 inches. Between depths of 48 and 67 inches is olive gray, moderately alkaline clay. The underlying layer, to a depth of 80 inches, is olive yellow and light brownish gray, moderately alkaline clay that has brownish yellow mottles.

This soil is difficult to work. When wet, it is sticky; when dry, it is hard and clods when plowed. Dense plow-pan layers are common in cultivated areas. Permeability is very slow, and available water capacity is high. The root zone is deep, but penetration by roots is slow. Runoff is medium. The hazard of water erosion is moderate.

Included with this soil in mapping are small areas of Branyon, Burleson, and Heiden soils. The Branyon soils are on stream terraces. The Burleson and Heiden soils have no particular pattern of occurrence. The included soils make up 10 to 20 percent of this map unit.

This soil is used mainly for crops. The potential for growing crops is high. Cotton and grain sorghum are the main crops, but corn and small grain are also grown. The main objectives of management are controlling erosion and improving tilth. Growing crops that produce large amounts of residue or growing deep-rooted legumes help control erosion and maintain the tilth.

This soil has high potential for pasture. It is well suited to improved bermudagrass, kleingrass, and King Ranch bluestem. Proper pasture management includes fertilization, weed control, and controlled grazing.

This soil has high potential for range, but very few acres are used for this purpose. The climax plant community is tall grasses and an overstory of a few large live oak, elm, and hackberry trees along the drainageways.

This soil has low potential for most urban uses. Its most restrictive limitations are shrinking and swelling with changes in moisture, corrosivity to uncoated steel, low strength, and slow percolation.

The potential for recreation is low. The clayey surface layer and the very slow permeability are the most restrictive limitations for this use. Potential for both openland and rangeland wildlife habitat is medium. Capability sub-class IIe; Blackland range site.

Information About Brokerage Services

11-2-2015

Texas law requires all real estate license holders to give the following information about brokerage services to prospective buyers, tenants, sellers and landlords.

TYPES OF REAL ESTATE LICENSE HOLDERS:

- A **BROKER** is responsible for all brokerage activities, including acts performed by sales agents sponsored by the broker.
- A **SALES AGENT** must be sponsored by a broker and works with clients on behalf of the broker.

A BROKER'S MINIMUM DUTIES REQUIRED BY LAW (A client is the person or party that the broker represents):

- Put the interests of the client above all others, including the broker's own interests;
- Inform the client of any material information about the property or transaction received by the broker;
- Answer the client's questions and present any offer to or counter-offer from the client; and
- Treat all parties to a real estate transaction honestly and fairly.

A LICENSE HOLDER CAN REPRESENT A PARTY IN A REAL ESTATE TRANSACTION:

AS AGENT FOR OWNER (SELLER/LANDLORD): The broker becomes the property owner's agent through an agreement with the owner, usually in a written listing to sell or property management agreement. An owner's agent must perform the broker's minimum duties above and must inform the owner of any material information about the property or transaction known by the agent, including information disclosed to the agent or subagent by the buyer or buyer's agent.

AS AGENT FOR BUYER/TENANT: The broker becomes the buyer/tenant's agent by agreeing to represent the buyer, usually through a written representation agreement. A buyer's agent must perform the broker's minimum duties above and must inform the buyer of any material information about the property or transaction known by the agent, including information disclosed to the agent by the seller or seller's agent.

AS AGENT FOR BOTH - INTERMEDIARY: To act as an intermediary between the parties the broker must first obtain the written agreement of *each party* to the transaction. The written agreement must state who will pay the broker and, in conspicuous bold or underlined print, set forth the broker's obligations as an intermediary. A broker who acts as an intermediary:

- Must treat all parties to the transaction impartially and fairly;
- May, with the parties' written consent, appoint a different license holder associated with the broker to each party (owner and buyer) to communicate with, provide opinions and advice to, and carry out the instructions of each party to the transaction.
- Must not, unless specifically authorized in writing to do so by the party, disclose:
 - that the owner will accept a price less than the written asking price;
 - that the buyer/tenant will pay a price greater than the price submitted in a written offer; and
 - any confidential information or any other information that a party specifically instructs the broker in writing not to disclose, unless required to do so by law.

AS SUBAGENT: A license holder acts as a subagent when aiding a buyer in a transaction without an agreement to represent the buyer. A subagent can assist the buyer but does not represent the buyer and must place the interests of the owner first.

TO AVOID DISPUTES, ALL AGREEMENTS BETWEEN YOU AND A BROKER SHOULD BE IN WRITING AND CLEARLY ESTABLISH:

- The broker's duties and responsibilities to you, and your obligations under the representation agreement.
- Who will pay the broker for services provided to you, when payment will be made and how the payment will be calculated.

LICENSE HOLDER CONTACT INFORMATION: This notice is being provided for information purposes. It does not create an obligation for you to use the broker's services. Please acknowledge receipt of this notice below and retain a copy for your records.

Buyers who are represented by an agent/broker must have their agent/broker actively involved and present at all showings to participate in any co-broker commissions.
